Breast Cancer Resistance Protein BCRP/ABCG2

Specific Inhibitors

- FTC, Ko143, Elacridar

Substrates

- Natural Substrates
- Xenobiotics
- Chemotherapeutics

In Normal Cells

- Liver and gut; Limits absorption and enhances elimination of drugs
- BBB and Testis; Limits penetration of drug into brain or testicular tumors
- Normal stem cells; Protect stem cells from damages by drugs

Pharmacokinetics

Poor Cancer
Treatment
Outcomes

Pharmacology

In Cancer Cells

- Limits attainment of therapeutic intracellular concentration of drugs (**Multi-Drug Resistance**)
- Effluxes drugs from cancer stem cells

BCRP Causes Resistance to Small Molecule Kinase Inhibitors Used in Targeted Therapy

CDK Inhibitor for CLL
Alvocidib (Flavopiridol)
Xenopus L. Oocytes

Mol Pharmacol, 2003
Clin Cancer Res, 2003

BCR-ABL Inhibitor for CML
Imatinib
BCR-ABL +ive K562 cells

Blood, 2006

IGFR1 Inhibitor
BMS-536924
Drug Resistant MCF7 cells

With Mayo Clinic
Mol Cancer Ther, 2011

TKI; Tyrosine kinase inhibitors, CDK; Cyclin dependent kinase, FLV; Flavopiridol, CLL; Chronic lymphocytic leukemia, CML; Chronic myelogenous leukemia, IGFR; Insulin-like growth factor 1 (IGF-1) receptor.

BCRP is a Universal Marker for Side Population (SP) Stem Cells in Normal Tissues and Malignant Tumors

FACS Analysis of Mouse Bone Marrow Cells

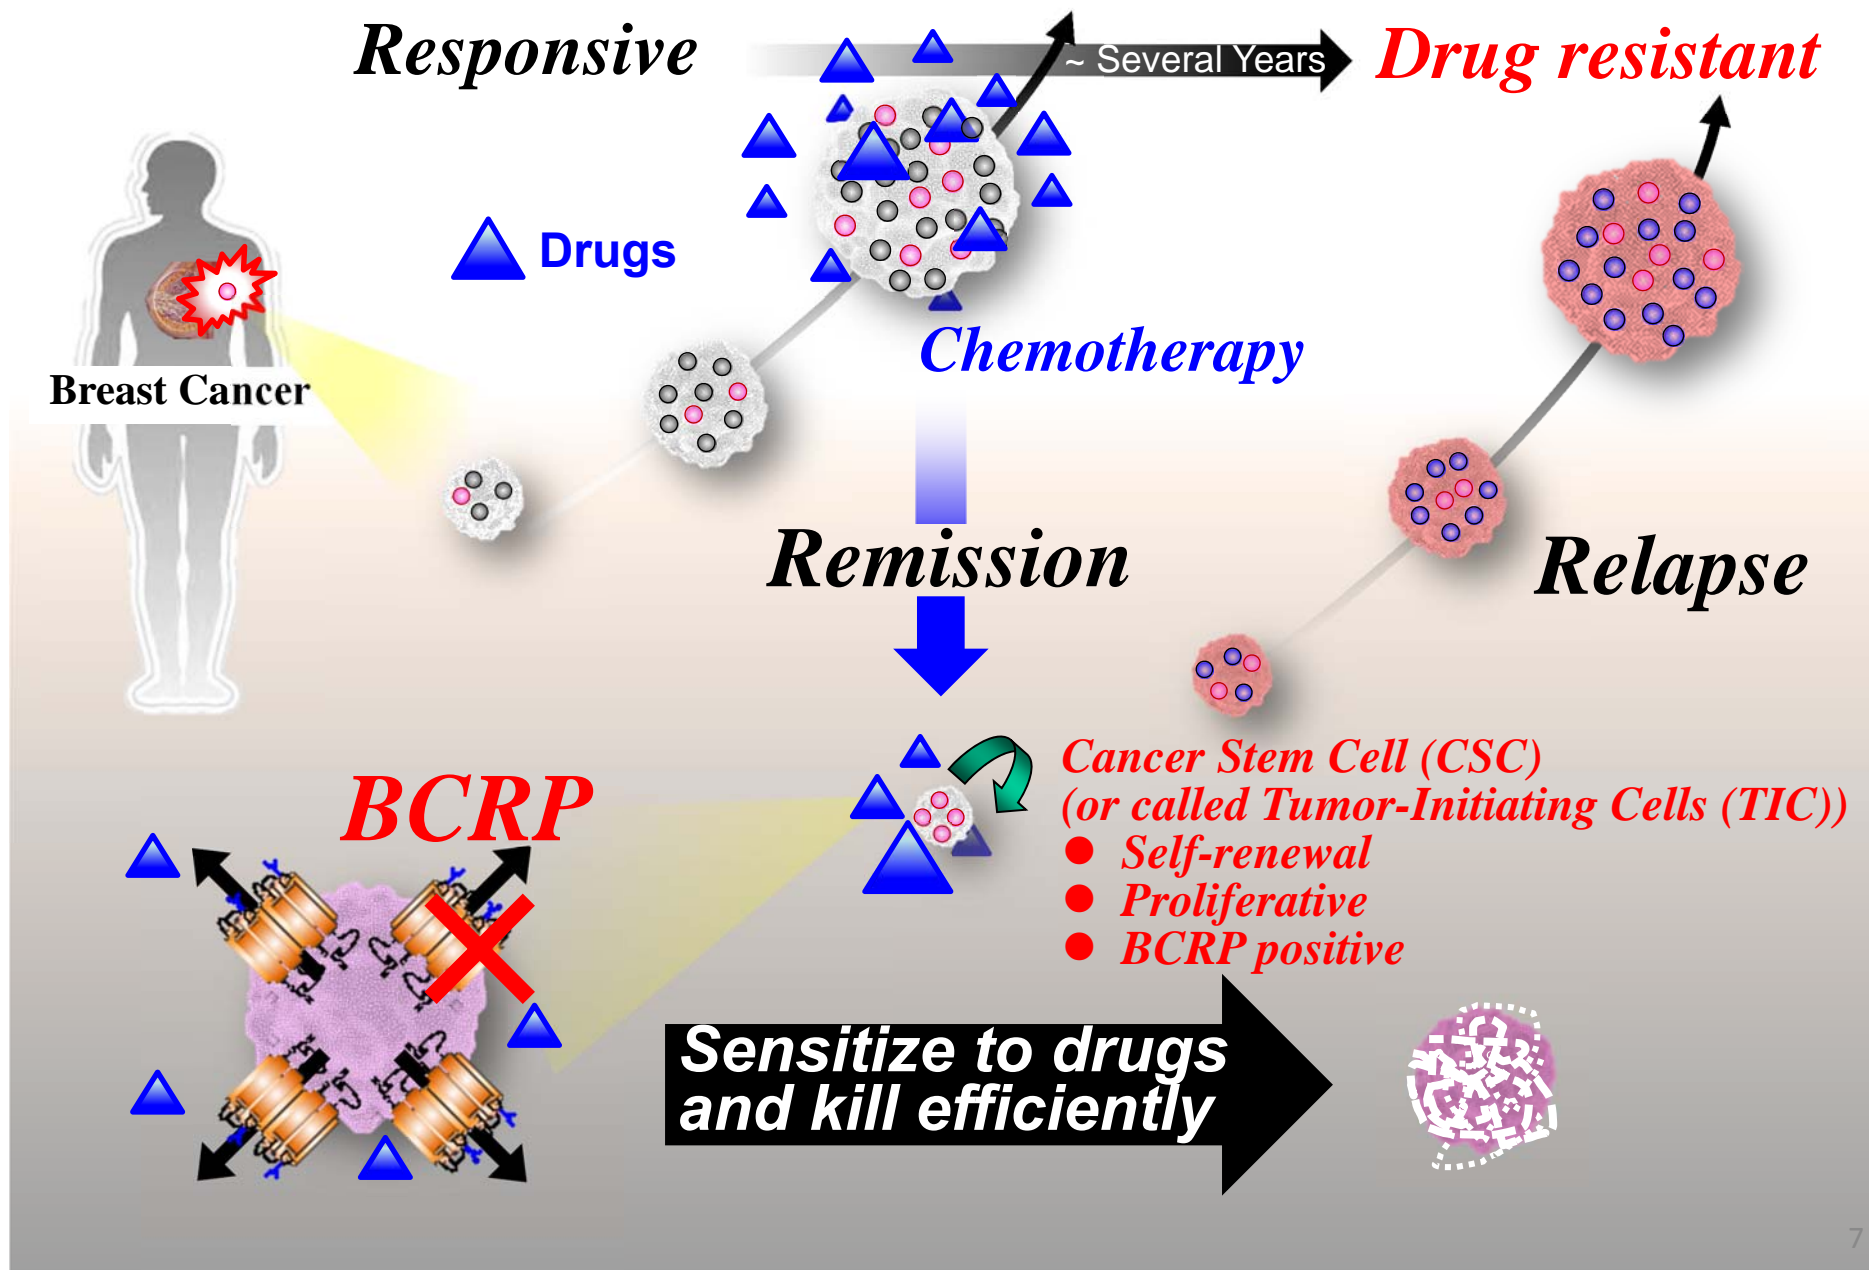

- ❑ Shields stem cells from the lethal effect of PPIX generated in hypoxia
- ❑ Protects cancer stem cells from damages by chemotherapeutic drugs

FACS; Florescence activation cell sorting, Hoechst 33342; DNA-binding dye and substrate of BCRP

With Dr. Schuetz (St Jude Children's Research Hospital) in *J Biol Chem*, 2003

BCRP May Protect Cancer Stem Cells

Known Mechanisms of Regulation of *BCRP* Gene Expression

HER2 Enhances BCRP in Breast Cancer (BC)

HER2 is

- An oncogenic RTK
- Overexpressed in 30% of BC patients
- Associated with
 - high **proliferation**,
 - high rate of **metastasis** (brain, lung)
 - **resistance** to chemotherapy

MCF-7 Cells

Patient-derived Breast Cancer

Immunocytochemistry

Protein

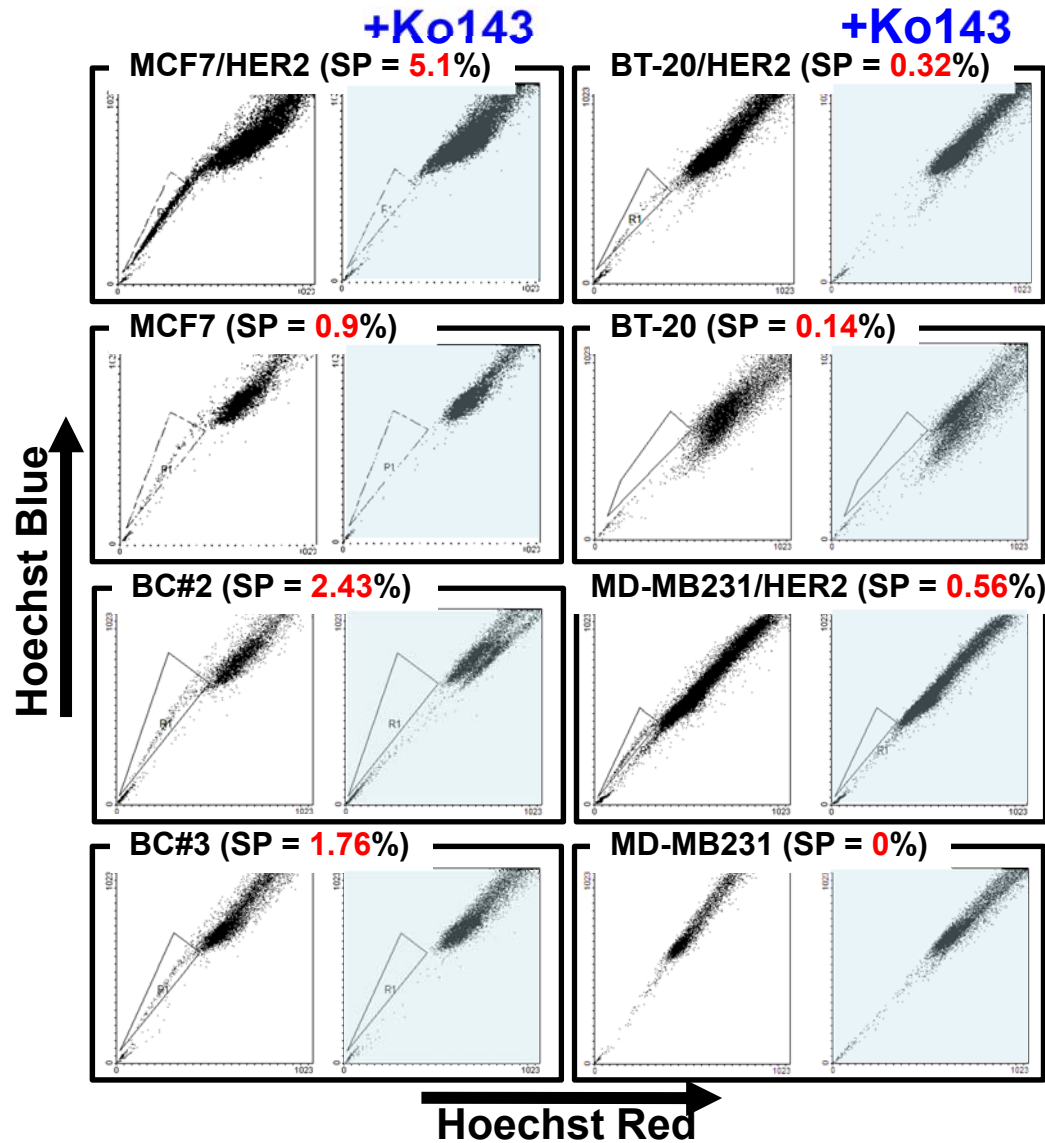

Protein

RTK; Receptor tyrosine kinase

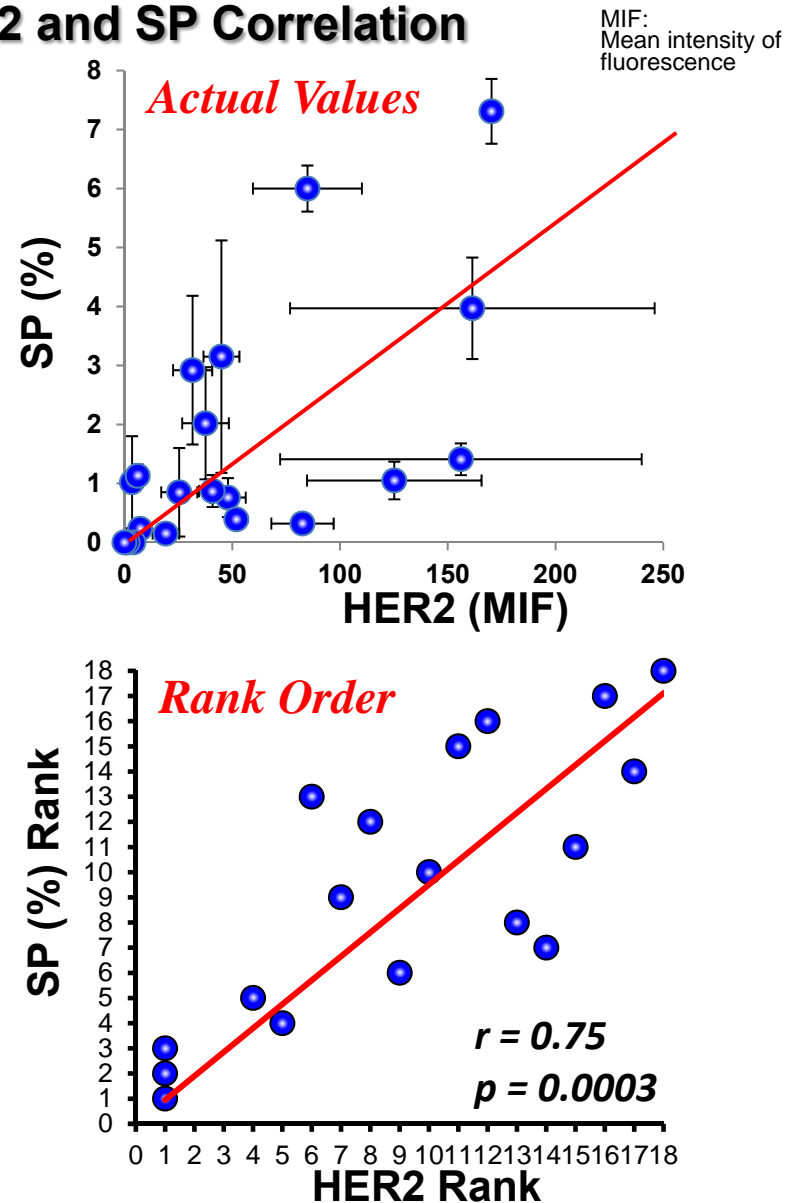

Correlation of HER2 Expression and SP Cells in Human Breast Cancer

SP Cells in Breast Cancer

Hoechst33342; 5 μ g/ml, Ko143 (specific inhibitor of BCRP); 1 μ M

HER2 and SP Correlation

Br J Cancer, 2010

Inhibiting HER2 Diminishes Tumorigenicity of SP Cells in NOD/SCID Mice

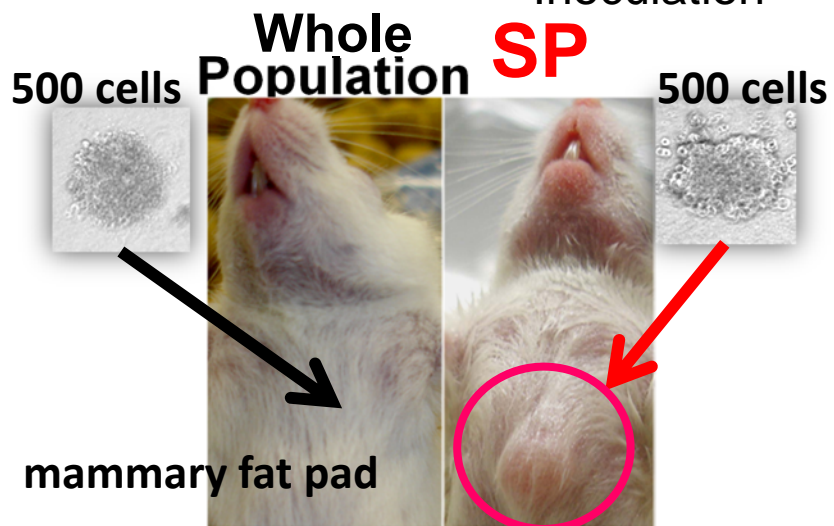

Inoculation of SP

Whole Population

MCF7/HER2 Cells

Sorting SP

Repopulation of SP in NOD/SCID Mice

SP Cell Type	SP Cells Injected	Control	+AG825	+Herceptin
		Tumors/Injections		
MCF7/HER2	100	11/14	0/7	0/5
	500	10/13	0/9	0/8
	1000	8/8	0/2	2/3
BC (Patient #4)	100	4/4	1/4	Not tested
	500	4/4	0/4	Not tested
Total		37/43	1/26	2/16

AG825; HER2-specific inhibitor

Sorted cells (100-1000) were Suspended with BD Matrigel™, incubated with either AG825 (100μM) or Trastuzumab (160μg/mL) for 2 hours before injection. Trastuzumab (160ug/mL) was injected into mice every other day during experiments. Tumors were observed eight to ten weeks.

HER2/HER3 Signaling Plays a Role In Expansion of SP Cells in Breast Cancer Cells

Western Blot – MCF7/HER2 Cells

MCF7/HER2 Cells (72 hr)

Patient BC#4 Cells (72 hr)

Shutting off HER2 oncogenic network is also effective to remove BCRP expression from TIC cells.

AG825; HER2-specific inhibitor

Br J Cancer, 2010

Blocking HER2 Is an Ideal Strategy to Kill Two Birds with One Stone

A Hypothesized Role of OATPs in Survival of Prostate Cancer Cells through Androgen-deprivation Therapy (ADT)

Castration Resistant Prostate Cancer (CRPC)

Testicular
Testosterone

Susceptible to androgen-deprivation therapy (ADT)

Plasma level; nearly 5 nM

Simple Diffusion

Testosterone

5 α R

DHT

Sulfate conjugate of
Adrenal DHEA
(DHEAS)

$-O_3SO$

Not affected by ADT

Plasma level; up to 10 μ M

DHEA

STS

DHEAS

OATP?

PSA

Growth

AR

Nucleus

DHEA; Dehydroepiandrosterone, OATP; Organic anion transporting polypeptide, AR; Androgen receptor, STS: Steroid sulfatase, 5 α R: 5 α -Reductase, PSA; Prostate specific antigen.

Stimulation Effect of DHEAS on Cell Growth of AR-positive Prostate Cancer LNCaP Cells

Cell Growth of LNCaP Cell

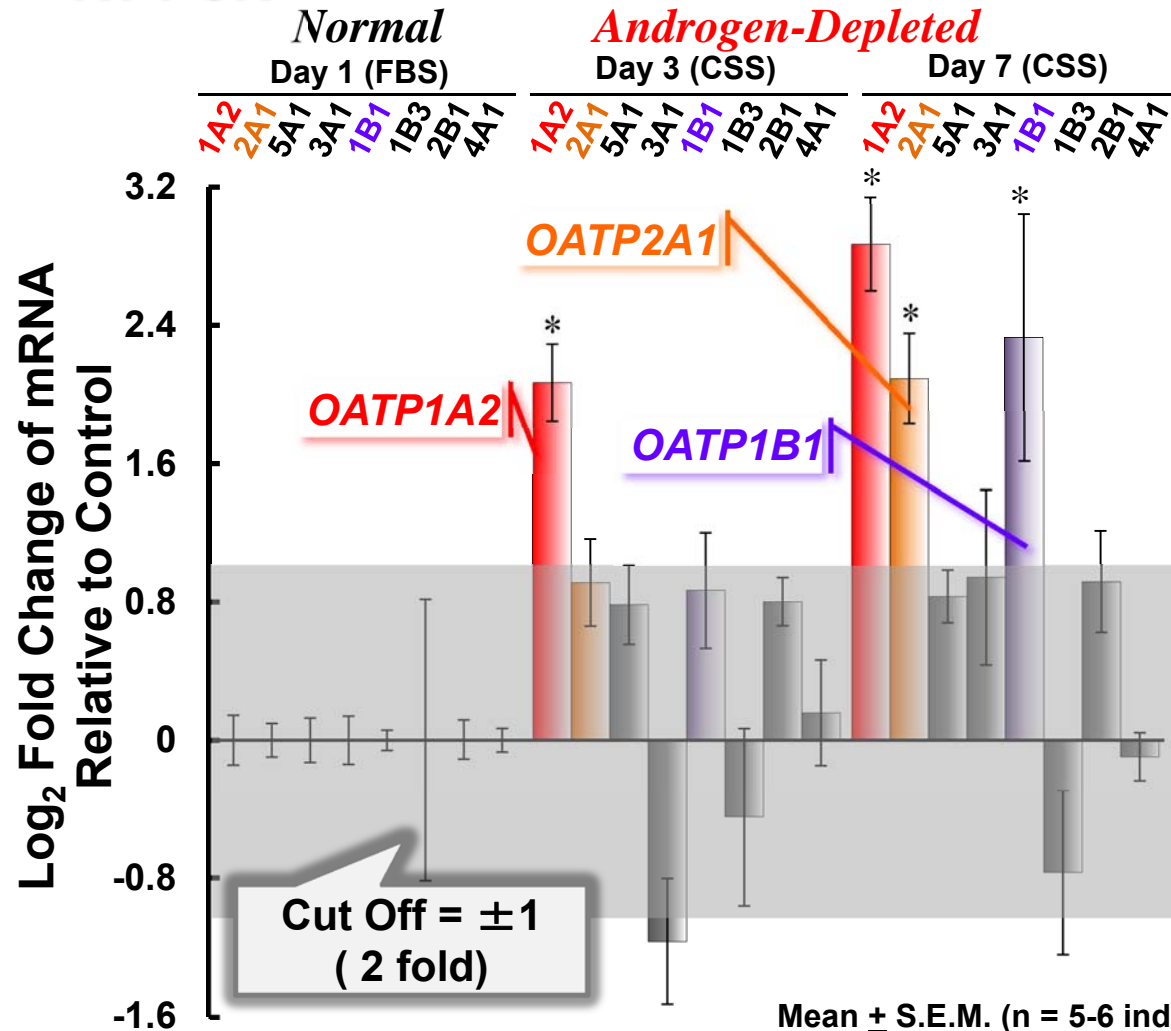

Characterization of DHEAS Transport into LNCaP Cells

E3S; Estrone-3-sulfate, TCA; Taurocholate, PRO; Probenecid, SAL; Salicylate, PAH; *p*-Amminohippuric acid, TEA; Tetraethylammonium, MPP⁺; 1-methyl-4-phenylpyridinium
 Mean ± S.E.M. (n = 3), * : *p*<0.05 (vs. Ctrl)

Enhanced Expression of OATPs in LNCaP Cells under Androgen-Depletion

RT-PCR

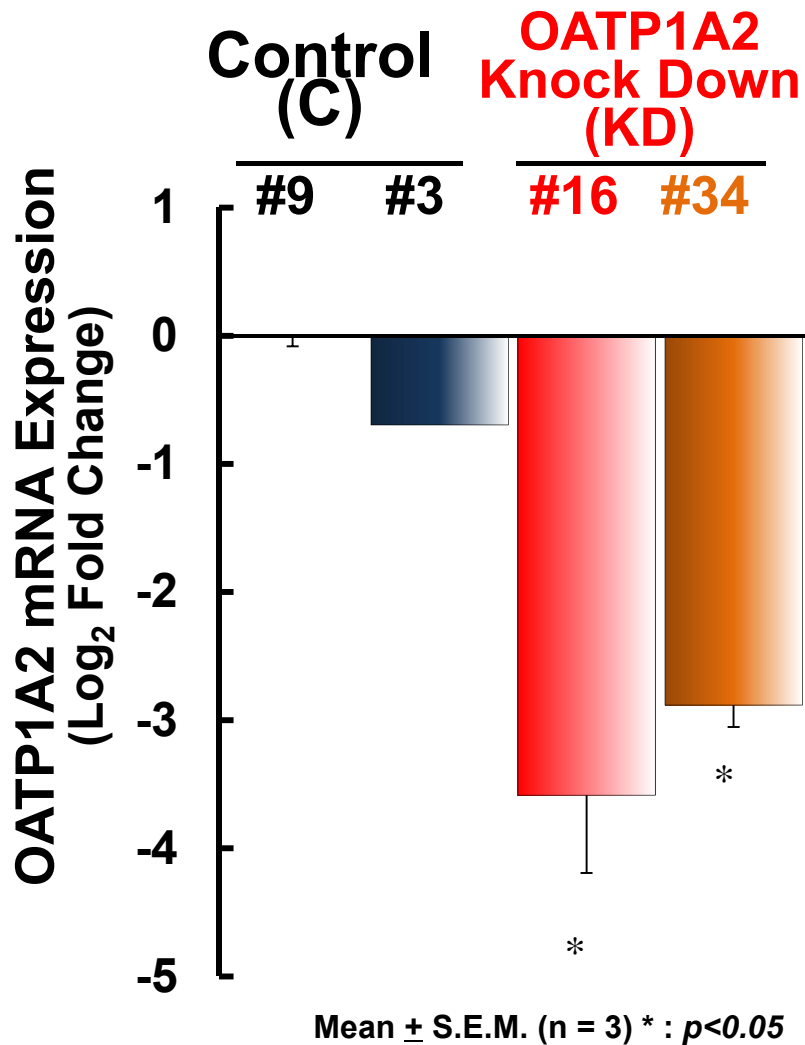

Mean \pm S.E.M. (n = 5-6 individual PCR results), * : $p < 0.05$ (vs. Day1)
 BC; Before castration, NC; Non-castration, C; Castration
 CSS; Charcoal-stripped serum.

Western Blotting

Knocking-down of OATP1A2 Diminishes Stimulation Effect of DHEAS in LNCaP Cells

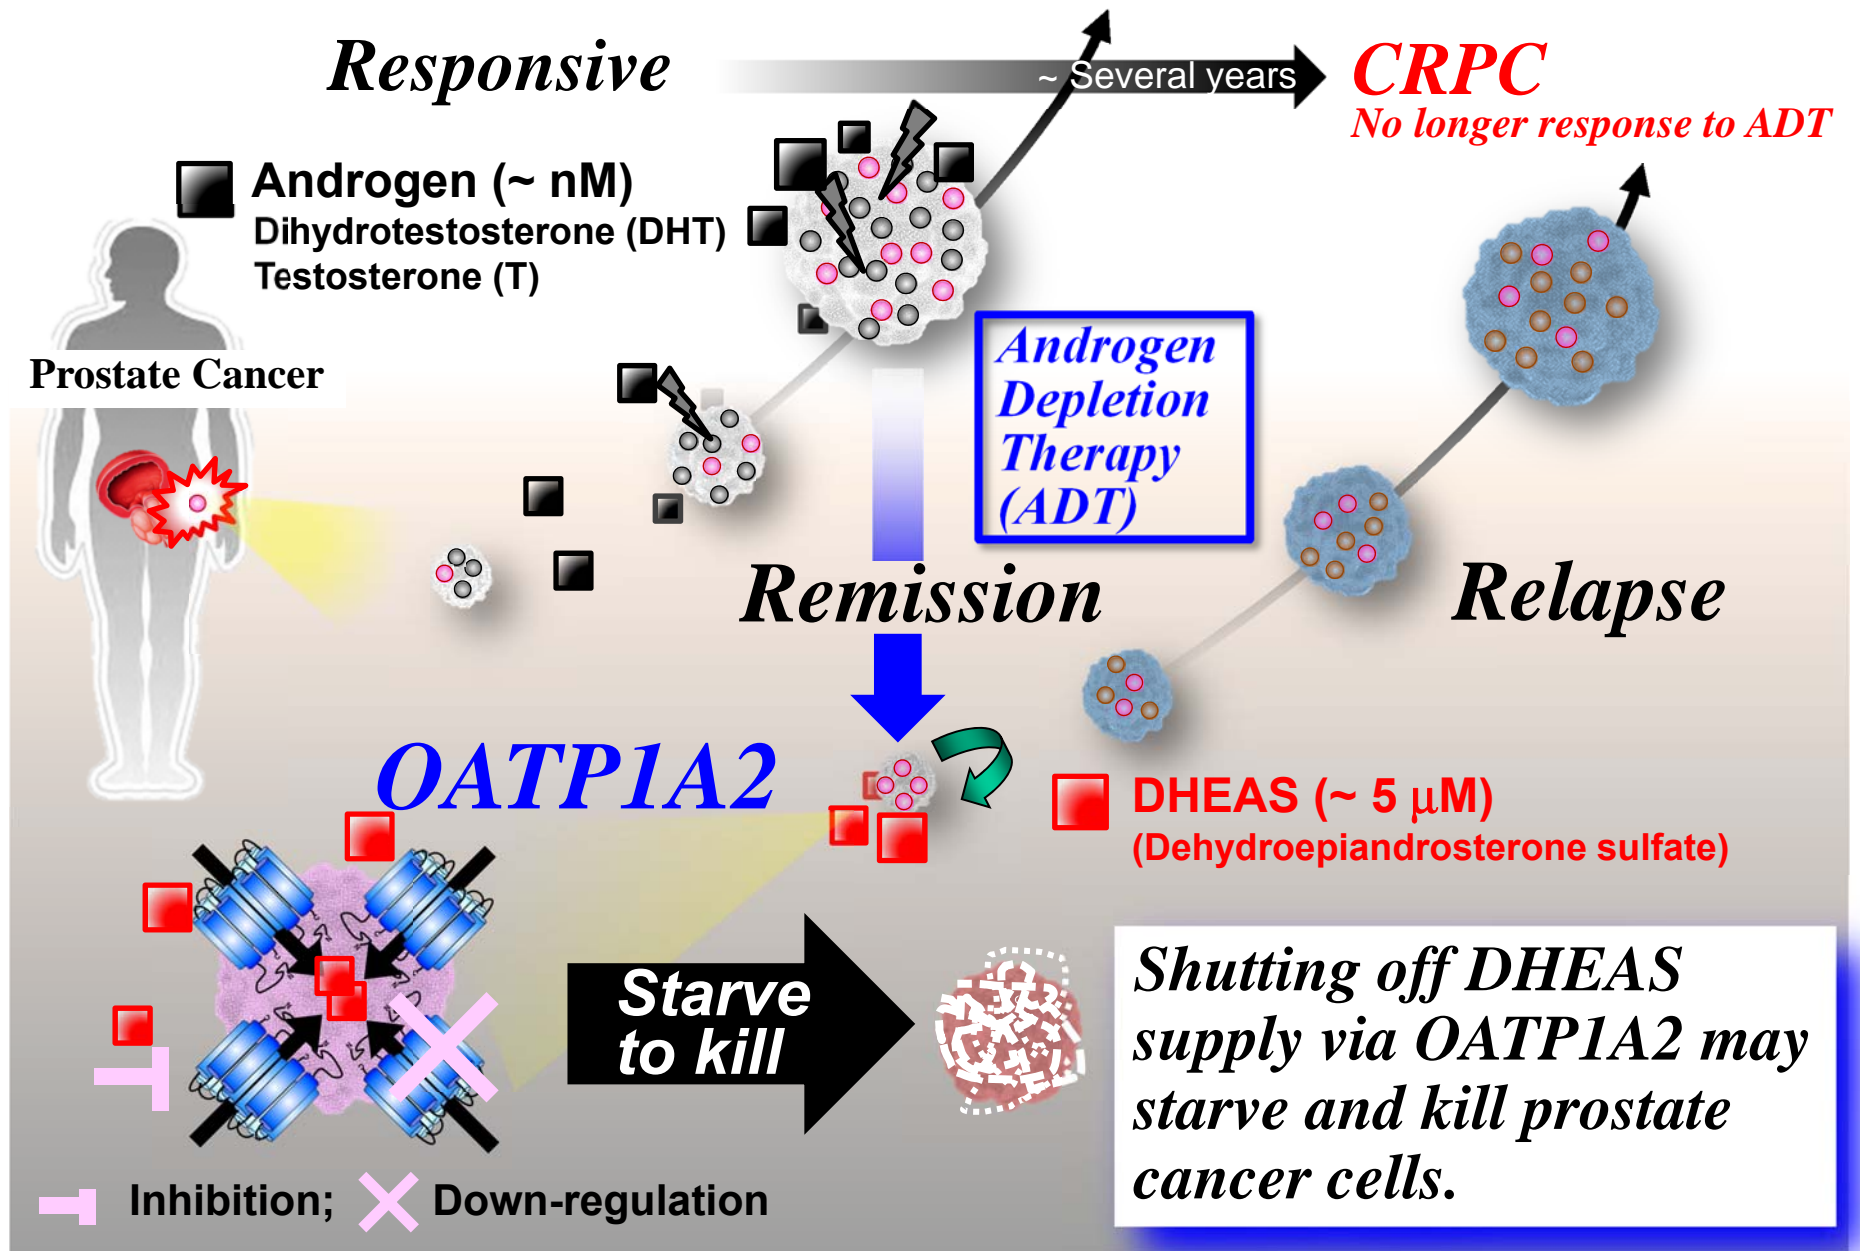

RT-PCR

Stimulation Effect of DHEAS

DHEAS Transporter OATPs May Play an Essential Role in Progression of CRPC

To Make Transporter-targeted Cancer Therapy Successful.....

From BCRP Study in Breast Cancer

■ Strategy to “kill two birds with one stone”

Find an oncogenic growth signal which regulates gene expression of MDR transporter as well, it may serve as a target to overcome a transporter-based MDR.

From OATP Study in Prostate Cancer

■ Strategy to “shut off supply for survival of damaged cells by chemotherapy”

Identify a specific transporter that tumor relies on for substance/nutrients to escape and survive chemotherapy, and it may serve as a target to starve and kill cancer cells.
